## ABOUT ME

I am a Software Developer with expertise in full-stack development, specializing in web design using the MERN stack. I have strong skills in API development and backend integration. My technical proficiency includes Java, Python, and JavaScript, along with technologies like React, Express, and Node.js. Additionally, I am skilled in Android app development using Java and Flutter. With a passion for UI/UX design, I create intuitive interfaces using Figma and Canva.

## PROJECTS

### • Campus Connect, Software Application (Dart | Firebase)

A college event management app developed using flutter framework, main objective of this project is to reduce the paperwork and manage collage events.

### • AquaAdventure ( Java| Firebase)

The water sports activity management App. It allows tourists to book tickets, view detailed activity information, and provide reviews. The main objective is to eliminate intermediaries, reducing ticket costs and ensuring a more transparent and affordable booking process.

### • BookMyHall ( PHP | MySQL)

It is a hall booking app Developed a user-friendly platform that caters to customers seeking halls for various occasions such as weddings, birthdays, and other events. The app offers a wide range of halls with different capacities and provides all essential event facilities at an additional cost.

### • RoadsideDelight ( Figma )

It is a food menu app design using figma. It mainly targets office workers, helping them quickly book food, make payments, and manage orders after work.
